PACOM PLUGIN IN GENETEC

The Pacom plugin in Genetec is an extension for Genetec Security Center that enables the integration of the Pacom intrusion system into Genetec. It allows the synchronization of Pacom elements as custom Genetec entities, reflecting their status, receiving alarms, and enabling manual actions such as arming or disarming zones.

FEATURES

- Synchronization of areas, inputs, and outputs from Pacom.
- Bidirectional communication with the Pacom system, allowing connection to various existing control panels.
- Reception of alarms in Genetec from Pacom.
- Sending of commands for arming, disarming, and isolating.

PART NUMBER AND SDK CONNECTIONS

- The plugin requires an SDK connection with the part number "GSC-1SDK-SAN2-PACOM".

EXTERNAL REQUIREMENTS

- Pacom EMCS version 2.1 SP4
- One or more Pacom 8002 control panels.
- Integration REST enabled by Pacom.
